## PC Based Hazard Monitoring Software

**Hazard Monitoring, Anytime, Anywhere.**

Maxi-Tronic has the industry leading controls, sensors, service and experience to provide complete hazard monitoring and control systems for your facility.

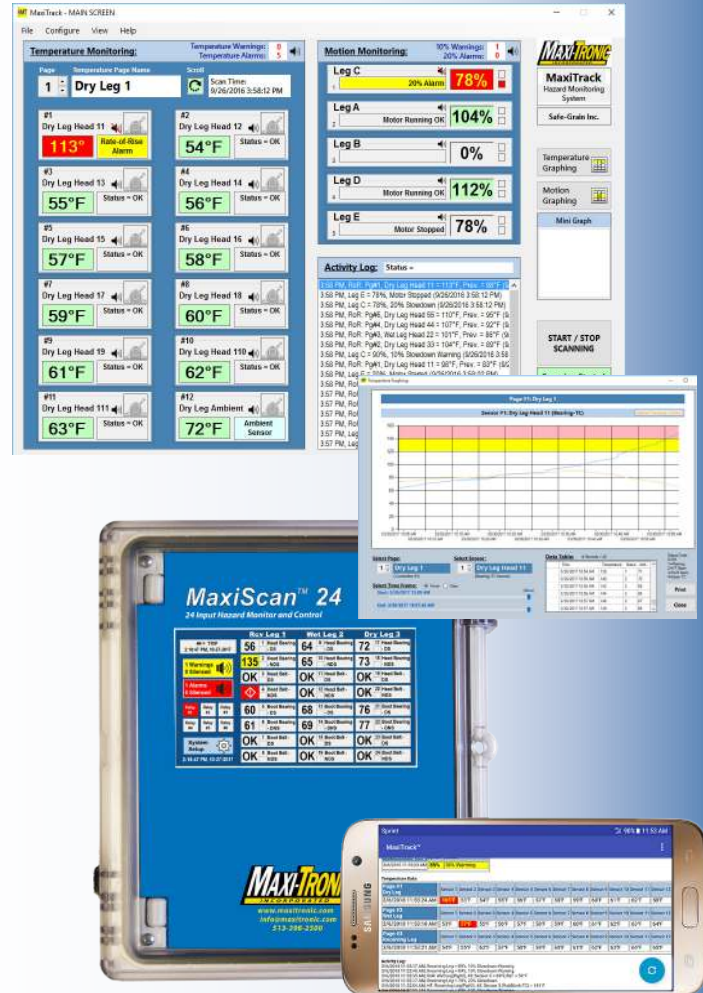

MaxiTrack™ v2 is the latest PC-based system for monitoring the motion, temperature, and belt misalignment sensors and controls in your elevators, conveyors, and material handling facilities.

Take hazard monitoring to new heights with MaxiTrack Hazard Monitoring.

### MaxiTrack™ v2 in Action

MaxiTrack v2 goes beyond traditional Scan, Display, and Alarm functions. All temperature and motion conditions are clearly displayed on the PC and on various remote devices.

Put more people in the safety loop with this easy-to-use interface. Receive alarm notifications with complete details via e-mail, text message, and Echotrack™ remote displays. Remote system monitoring using a browser in any web enabled device or by using the free Android app.

- Underspeed motion monitoring
- Bearing temperature monitoring
- Belt misalignment monitoring

- Real-time temperature and motion graphing
- Compatible with all existing Maxi-Tronic controls such as MaxiScan 24 (shown above), MT600, EZ521.
- Wireless option reduces installation costs
- Complete alarm and data logging and archiving
